Contents of Volume 127

Number 1, 7 July 1987

SMITH, D. A. and SICILIA, S., The Theory of Sliding Filament Models for Muscle Contraction. I. The Two-state Model 1

POZNANSKI, R. R., Transient Response in a Somatic Shunt Cable Model for Synaptic Input Activated at the Terminal 31

HARPENDING, H. and ROGERS, A., On Wright's Mechanism for Intergroup Selection 51

KONINGS, D. A. M., VAN DUIJN, L. P., VOORMA, H. O. and HOGEWEG, P., Minimal Energy Foldings of Eukaryotic mRNAs Form a Separate Leader Domain 63

SPEAKMAN, J. R. and RACEY, P. A., The Equilibrium Concentration of Oxygen-18 in Body Water: Implications for the Accuracy of the Double-labelled Water Technique and a Potential New Method of Measuring RQ in Free-living Animals 79

MAURER, B. A., Scaling of Biological Community Structure: A Systems Approach to Community Complexity 97

DOUCET, P. G. and WILSCHUT, A. N., Theoretical Studies on Animal Orientation. III. A Model for Kinesis. 111

Number 2, 21 July 1987

VON ZGLINICKI, T., A Mitochondrial Membrane Hypothesis of Aging . 127

VICKERY, V. L., How to Cheat Against a Simple Mixed Strategy ESS . 133

TAMACHI, N., The Evolution of Alarm Calls: an Altruism with Nonlinear Effect 141

SERWER, P., The Mechanism for Producing Two Symmetries at the Head-Tail Junction of Bacteriophage: a Hypothesis 155

SIBBALD, P. R. and WHITE, M. J., How Probable Are Antibody Cross-reactions? 163

YAMAMURA, N., A Model on Correlation between Precopulatory Guarding and Short Receptivity to Copulation 171

KRETSCHMER, M., SCHELLENBERGER, W. and HOFMANN, E., The Appearance of a Critical Input Concentration of Fructose 6-Phosphate in the 6-Phosphofructo-2-Kinase/Fructose 2,6-Bisphosphatase Cycle . . 181

ENQUIST, M. and LEIMAR, O., Evolution of Fighting Behaviour: The Effect of Variation in Resource Value 187

MCCALLUM, H. I., Predator Regulation of *Acanthaster planci* 207

MENÉNDEZ-ARIAS, L., GAVILANES, J. G. and RODRIGUEZ, R., A Structural Comparison of Type c Lysozymes Based on Their Hydropathic Profiles 221

COWAN, R., COLLIS, C. M. and GRIGG, G. W., Breakage of Double-stranded DNA Due to Single-stranded Nicking 229

LETTERS TO THE EDITOR

COOPER, S., Cell Cycle Controls in Eukaryotic Cells: A Reply . . 247

RAO, A. S. and SINGH, R., Some Speculations on Prion Protein Replication and Morphology 251

Number 3, 7 August 1987

WANG, Z.-X. and TSOU, C.-L., Kinetics of Substrate Reaction During Irreversible Modification of Enzyme Activity for Enzymes Involving Two Substrates 253

RASMUSSEN, N., A New Model of Developmental Constraints as Applied to the *Drosophila* System 271

ARMALEO, D., Structure and Evolution of Prokaryotic and Eukaryotic RNA Polymerases: a Model 301

CHEN, I. I. H. and BATTARBEE, H. D., The Quantitative Estimation of Microvessels in Microvascular Networks 315

LEUCHTAG, H. R., Indications of the Existence of Ferroelectric Units in Excitable-Membrane Channels 321

LEUCHTAG, H. R., Phase Transitions and Ion Currents in a Model Ferroelectric Channel Unit 341

CAVALIER-SMITH, T., Bacterial DNA Segregation: Its Motors and Positional Control 361

LETTERS TO THE EDITOR

VON HEIJNE, G. and UHLÉN, M., Homology to Region X from Staphylococcal Protein A is *not* Unique to Cell Surface Proteins . . 373

Number 4, 21 August 1987

MINI REVIEW

POTTEN, C. S. and LOEFFLER, M., A Comprehensive Model of the Crypts of the Small Intestine of the Mouse Provides Insight into the Mechanisms of Cell Migration and the Proliferation Hierarchy 381

GARCÍA-TEJEDOR, A., MORÁN, F. and MONTERO, F., Influence of the Hypercyclic Organization on the Error Threshold 393

ELLIOTT, R. J. and GOODFELLOW, J. M., Monte Carlo Simulations of Nucleotide Crystal Hydrates and their Counter-ions 403

PEPER, A., GRIMBERGEN, C. A., KRAAL, J. W. and ENGELBART, J. H., An Approach to the Modeling of the Tolerance Mechanism in the Drug Effect. I: The Drug Effect as a Disturbance of Regulations . . 413

TUCKWELL, H. C., Diffusion Approximations to Channel Noise . . 427

HERVAGAULT, J.-F. and CANU, S., Bistability and Irreversible Transitions in a Simple Substrate Cycle 439

BABITCH, J. A. and ANTHONY, F. A., Grasping for Calcium Binding Sites in Sodium Channels With an EF Hand 451

CANN, J. R., Theory of Electrophoresis of Hybridizing Enzymes with Kinetic Control: Implications for Population Genetics of Electrophoretic Markers 461

BOULANGER, T., VERCAUTEREN, D. P., DURANT, F. and ANDRE, J.-M., 3- and 5-Isoxazolol Zwitterions: an *ab initio* Molecular Orbital Study Relating to GABA Agonism and Antagonism 479

ELLINGTON, A. D. and BENNER, S. A., Free Energy Differences between Enzyme Bound States 491

Index to Volume 127

Acanthaster planci, predator regulation of, 207
Aging, a mitochondrial membrane hypothesis of, 127
Agonism, GABA, and antagonism, an *ab initio* molecular orbital study relating to; 3- and 5-isoxazolol zwitterions, 479
Alarm calls, the evolution of; an altruism with nonlinear effects, 141
Altruism with nonlinear effect; the evolution of alarm calls, 141
ANDRE, J.-M. (see BOULANGER, T.), 479
Animal orientation, theoretical studies; a model for kinesis, 111
Animals, free-living, the equilibrium concentration of oxygen-18 in body water: implications for the accuracy of the double-labelled water technique and a potential new method of measuring RQ in, 79
Antagonism, an *ab initio* molecular orbital study relating to GABA agonism and; 3- and 5-isoxazolol zwitterions, 479
ANTHONY, F. A. (see BABITCH, J. A.), 451
Antibody cross-reactions, how probable are they?, 163
ARMALEO, D., Structure and evolution of prokaryotic and eukaryotic RNA polymerases: a model, 301

BABITCH, J. A. and ANTHONY, F. A., Grasping for calcium binding sites in sodium channels with an EF hand, 451
Bacterial DNA segregation: its motors and positional control, 361
Bacteriophage, the mechanism for producing two symmetries at the head–tail junction; a hypothesis, 155
BATTARBEE, H. D. (see CHEN, I. I. H.), 315
Behaviour, fighting, evolution of; the effect of variation in resource value, 187
Behaviour, optimal, learning rules, and evolutionary stability (letter), 377
BENNER, S. A. (see ELLINGTON, A. D.), 491
Binding sites, calcium, in sodium channels, grasping for, with an EF hand, 451
Biological community structure, scaling of; a systems approach to community complexity, 97
Bistability and irreversible transitions in a simple substrate cycle, 439
Body water, the equilibrium concentration of oxygen-18 in; implications for accuracy of the double-labelled water technique and a potential new method of measuring RQ in free-living animals, 79
BOULANGER, T., VERCAUTEREN, D. P., DURANT, F. and ANDRE, J.-M., 3- and 5-Isoxazolol zwitterions: an *ab initio* molecular orbital study relating to GABA agonism and antagonism, 479
Bound states, enzyme, free energy differences between, 491

Calcium binding sites in sodium channels, grasping for, with an EF hand, 451
CANN, J. R., Theory of electrophoresis of hybridizing enzymes with kinetic control: implications for population genetics of electrophoretic markers, 461
CANU, S. (see HERVAGAULT, J.-F.), 439
CAVALIER-SMITH, T., Bacterial DNA segregation: its motors and positional control, 361
Cell cycle controls in eukaryotic cells: a reply (letter), 247
Cell migration and the proliferation hierarchy, a comprehensive model of the crypts of the small intestine of the mouse provides insight into, 381
Cell surface proteins, homology to region X from staphylococcal protein A is *not* unique to (letter), 373

Channel noise, diffusion approximations to, 427
Channel unit, ferroelectric, phase transitions and ion currents in, 341
Channels, excitable-membrane, indications of the existence of ferroelectric units in, 321
Channels, sodium, grasping for calcium binding sites in, with an EF hand, 451
Cheating against a simple mixed strategy ESS, 133
CHEN, I. I. H. and BATTARBEE, H. D., The quantitative estimation of microvessels in microvascular networks, 315
COLLIS, C. M. (see COWAN, R.), 229
Community complexity, a systems approach; scaling of biological community structure, 97
Complexity, community, a systems approach; scaling of biological community structure, 97
Controls, cell cycle, in eukaryotic cells; a reply (letter), 247
COOPER, S., Cell cycle controls in eukaryotic cells: a reply (letter), 247
Copulation, a model on correlation between precopulatory guarding and short receptivity to, 171
COWAN, R., COLLIS, C. M. and GRIGG, G. W., Breakage of double-stranded DNA due to single-stranded nicking, 229
Crypts of the small intestine of the mouse, a comprehensive model provides insight into the mechanisms of cell migration and the proliferation hierarchy, 381
Crystal hydrates, nucleotide, and their counter-ions, Monte Carlo simulations of, 403
Currents, ion, in a model ferroelectric unit, phase transitions and, 341
Cycle, substrate, simple, bistability and irreversible transitions in, 439

Developmental constraints, a new model, as applied to the *Drosophila* system, 271
Diffusion approximations to channel noise, 427
DNA, double-stranded, breakage due to single-stranded nicking, 229
DNA segregation, bacterial: its motors and positional control, 361
Double-labelled water technique, accuracy of, implications of the equilibrium concentration of oxygen-18 in body water, 79
DOUCET, P. G. and WILSCHUT, A. N., Theoretical studies on animal orientation. III. A model for kinesis, 111
Drosophila system, a new model of developmental constraints as applied to, 271
Drug effect, an approach to the modeling of the tolerance mechanism in; the drug effect as a disturbance of regulations, 413
DURANT, F. (see BOULANGER, T.), 479

EF hand, grasping for calcium binding sites in sodium channels with, 451
Electrophoresis of hybridizing enzymes with kinetic control, theory of; implications for population genetics of electrophoretic markers, 461
ELLINGTON, A. D. and BENNER, S. A., Free energy differences between enzyme bound states, 491
ELLIOTT, R. J. and GOODFELLOW, J. M., Monte Carlo simulations of nucleotide crystal hydrates and their counter-ions, 403
Energy, free, differences between enzyme bound states, 491
ENGEKBART, J. H. (see PEPER, A.), 413
ENQUIST, M. and LEIMAR, O., Evolution of fighting behaviour: the effect of variation in resource value, 187
Enzyme activity, kinetics of substrate reaction during irreversible modification of, for enzymes involving two substrates, 253
Enzyme bound states, free energy differences between, 491
Enzymes, hybridizing, theory of electrophoresis of, with kinetic control; implications for population genetics of electrophoretic markers, 461
Error threshold, influence of the hypercyclic organization on, 393
ESS, simple mixed strategy, how to cheat against, 133
Eukaryotic cells, cell cycle controls in; a reply (letter), 247

Eukaryotic mRNAs, minimal energy foldings form a separate leader domain, 63
Eukaryotic and prokaryotic RNA polymerase, model of structure and evolution of, 301
Evolution of alarm calls: an altruism with nonlinear effect, 141
Evolution of fighting behaviour: the effect of variation in resource value, 187
Evolution and structure of prokaryotic and eukaryotic RNA polymerases: a model, 301
Evolutionary stability, learning rules, and optimal behaviour (letter), 377
Excitable-membrane channels, indications of the existence of ferroelectric units in, 321

Ferroelectric channel unit, phase transitions and ion currents in, 341
Ferroelectric units in excitable-membrane channels, indications of the existence of, 321
Fighting behaviour, the evolution of; the effect of variation in resource value, 187
Filament, sliding, models for muscle contraction; theory of the two-state model, 1
Foldings, minimal energy, of eukaryotic mRNAs form a separate leader domain, 63
Free energy differences between enzyme bound states, 491
Fructose 6-phosphate, the appearance of a critical input concentration of, in the 6-phospho-fructo-2-kinase/fructose 2,6-bisphosphatase cycle, 181

GABA agonism and antagonism, an *ab initio* molecular orbital study relating to; 3- and 5-isoxazolol zwitterions, 479
GARCÍA-TEJEDOR, A., MORÁN, F. and MONTERO, F., Influence of the hypercyclic organization on the error threshold, 393
GAVILANES, J. G. (see MENÉNDEZ-ARIAS, L.), 221
Genetics, population, of electrophoretic markers; implications of theory of electrophoresis of hybridizing enzymes with kinetic control, 461
GOODFELLOW, J. M. (see ELLIOTT, R. J.), 403
GRIGG, G. W. (see COWAN, R.), 229
GRIMBERGEN, C. A. (see PEPER, A.), 413
Guarding, precopulatory, and short receptivity to copulation, a model on correlation between, 171

HARLEY, C. B., Learning rules, optimal behaviour, and evolutionary stability (letter), 377
HARPENDING, H. and ROGERS, A., On Wright's mechanism for intergroup selection, 51
Head-tail junction of bacteriophage, a hypothesis for the mechanism for producing two symmetries at, 155
HERVAGAULT, J.-F. and CANU, S., Bistability and irreversible transitions in a simple substrate cycle, 439
HOFMANN, E. (see KRETSCHMER, M.), 181
HOGEWEG, P. (see KONINGS, D. A. M.), 63
Homology to region X from staphylococcal protein A is *not* unique to cell surface proteins (letter), 373
Hybridizing enzymes, theory of electrophoresis of, with kinetic control; implications for population genetics of electrophoretic markers, 461
Hydrates, crystal, nucleotide, and their counter-ions, Monte Carlo simulations of, 403
Hydropathic profiles as a basis for structural comparison of type c lysozymes, 221
Hypercyclic organization, influence of the error threshold on, 393

Intergroup selection, on Wright's mechanism for, 51
Intestine, small, of the mouse, a comprehensive model of the crypts provides insight into the mechanisms of cell migration and the proliferation hierarchy, 381
Ion currents in a model ferroelectric channel unit, phase transitions and, 341
3- and 5-Isoxazolol zwitterions: an *ab initio* molecular orbital study relating to GABA agonism and antagonism, 479

Kinesis model; theoretical studies on animal orientation, 111
Kinetic control, theory of electrophoresis of hybridizing enzymes with; implications for population genetics of electrophoretic markers, 461
Kinetics of substrate reaction during irreverisble modification of enzymes activity for enzymes involving two substrates, 253
KONINGS, D. A. M., VAN DUIJN, L. P., VOORMA, H. O. and HOGEWEG, P., Minimal energy foldings of eukaryotic mRNAs form a separate leader domain, 63
KRAAL, J. W. (see PEPER, A.), 413
KRETSCHMER, M., SCHELLENBERGER, W. and HOFMANN, E., The appearance of a critical input concentration of fructose 6-phosphate in the 6-phosphofructo-2-kinase/fructose 2,6-bisphosphatase cycle, 181

Leader domain, separate, is formed by minimal energy foldings of eukaryotic mRNAs, 63
Learning rules, optimal behaviour, and evolutionary stability (letter), 377
LEIMAR, O. (see ENQUIST, M.), 187
LEUCHTAG, H. R., Indications of the existence of ferroelectric units in excitable-membrane channels, 321
LEUCHTAG, H. R., Phase transitions and ion currents in a model ferroelectric channel unit, 341
LOEFFLER, M. (see POTTEN, C.S.), 381
Lysozymes, type c, a structural comparison based on their hydropathic profiles, 221

MCCALLUM, H. I., Predator regulation of *Acanthaster planci*, 207
Markers, electrophoretic, implications of theory of electrophoresis of hybridizing enzymes with kinetic control for population genetics of, 461
MAURER, B. A., Scaling of biological community structure: a systems approach to community complexity, 97
Membrane, mitochondrial, hypothesis of aging, 127
MENÉNDEZ-ARIAS, L., GAVILANES, J. G. and RODRIGUEZ, R., A structural comparison of type c lysozymes based on their hydropathic profiles, 221
Microvessels in microvascular networks, the quantitative estimation of, 315
Migration, cell, and the proliferation hierarchy, a comprehensive model of the crypts of the small intestime of the mouse provides insight into, 381
Mitochondrial membrane hypothesis of aging, 127
Molecular orbital *ab initio* study relating to GABA agonism and antagonism; 3- and 5-isoxazolol zwitterions, 479
Monte Carlo simulations of nucleotide crystal hydrates and their counter-ions, 403
MONTERO, F. (see GARCÍA-TEJEDOR, A.), 393
MORÁN, F. (see GARCÍA-TEJEDOR, A.), 393
Morphology, some speculations on prion protein replication and (letter), 251
Motors and positional control; bacterial DNA segregation, 361
Mouse, a comprehensive model of the crypts of the small intestine provides insight into the mechanisms of cell migration and the proliferation hierarchy, 381
mRNAs, eukaryotic, minimum energy foldings form a separate leader domain, 63
Muscle contraction, theory of sliding filament models; the two-state model, 1

Networks, microvascular, the quantitative estimation of microvessels in, 315
Noise, channel, diffusion approximations to, 427
Nucleotide crystal hydrates and their counter-ions, Monte Carlo simulations of, 403

Organization, hypercyclic, influence of the error threshold on, 393
Orientation, animal, theoretical studies; a model for kinesis, 111

Oxygen-18 equilibrium concentration in body water: implications for accuracy of the double-labelled water technique and a potential new method of measuring RQ in free-living animals, 79

PEPER, A., GRIMBERGEN, C. A., KRAAL, J. W. and ENGELBART, J. H., An approach to the modeling of the tolerance mechanism in the drug effect. I. The drug effect as a disturbance of regulations, 413
Phase transitions and ion currents in a model ferroelectric channel unit, 341
6-Phosphofructo-2-kinase/fructose 2,6-bisphosphatase cycle, the appearance of a critical input concentration of fructose 6-phosphate in, 181
Population genetics of electrophoretic markers, implications of theory of electrophoresis of hybridizing enzymes with kinetic control, 461
Positional control and motors; bacterial DNA segregation, 361
POTTEN, C. S. and LOEFFLER, M., A comprehensive model of the crypts of the small intestine of the mouse provides insight into the mechanisms of cell migration and the proliferation hierarchy, 381
